Contents Volume 56

Contents

A distributed EDI model
E. Jui-Lin Lu and R.-J. Hwang 1

SMART mobile agent facility
J. Wong, G. Helmer, V. Naganathan, S. Polavarapu, V. Honavar and L. Miller 9

A mechanism for view consistency in a data warehousing system
J.-T. Horng and C.-W. Chen 23

Decentralized user group assignment in Windows NT
G.-J. Ahn and R. Sandhu 39

Effectiveness of the FDDI-M protocol in supporting synchronous traffic
E. Chan, D. Chen and V.C.S. Lee 51

The prediction of faulty classes using object-oriented design metrics
K. El Emam, W. Melo and J.C. Machado 63

Interfacing MATLAB with a parallel virtual processor for matrix algorithms
J.P. Hoffbeck, M. Sarwar and E.J. Rix 77

A dynamic simulator of software processes to test process assumptions
P. Donzelli and G. Iazeolla 81

Notable design patterns for domain-specific languages
D. Spinellis 91

Dot-coms' coma
A. Shama 101

Employing multiple views to separate large-scale software systems
H.-H. Deubler 105

A methodology for building content-oriented hypermedia systems
W. Suh and H. Lee 115

Synchronization and flow adaptation schemes for reliable multiple-stream transmission in multimedia presentations
C.-M. Huang, H.-Y. Kung and J.-L. Yang 133

Spatial database with each picture self-contained multiscape and access control in a hierarchy
D.-C. Lou and T.-L. Yin 153

A fast content-based indexing and retrieval technique by the shape information in large image database
D.-H. Lee and H.-J. Kim 165

Database management systems: design considerations and attribute facilities
G. Post and A. Kagan 183

Seeking consonance in information systems
G. Klein and J.J. Jiang 195

Job scheduling in heterogeneous distributed systems
H.D. Karatza 203

An optimal scheduling algorithm for minimizing the computing period of cyclic synchronous tasks on multiprocessors
H.-J. Park and B.K. Kim 213

Autonomous agents for coordinated distributed parameterized heuristic routing in large dynamic communication networks
A.R. Mikler, V. Honavar and J.S.K. Wong 231

Proteus: an efficient runtime reconfigurable distributed shared memory system
J.-C. Ueng, C.-K. Shieh, T.-Y. Liang and J.-B. Chang 247

Supporting parallel computing on a distributed object architecture
C. Wang and Y.M. Teo 261

ODCHP: a new effective mechanism to maximize parallelism of nested loops with non-uniform dependences
D.-L. Pean and C. Chen 279
